

MDQ MDQ MDQ!

Konfigurera metadatahämtning i Shibboleth Identity Provider för SAML

```
<MetadataProvider id="DynamicEntityMetadata"
xsi:type="DynamicHTTPMetadataProvider"
    connectionRequestTimeout="PT2S"
    connectionTimeout="PT2S"
    socketTimeout="PT4S">

<MetadataFilter xsi:type="SignatureValidation" requireSignedRoot="true"
    certificateFile="%{idp.home}/credentials/md-signer2.crt" />
<MetadataFilter xsi:type="RequiredValidUntil" maxValidityInterval="P14D"/>
<MetadataQueryProtocol>https://mds.swamid.se/</MetadataQueryProtocol>
</MetadataProvider>
```

Shibboleth proxied MFA

Sunet Hackathon 23-24 april 2023

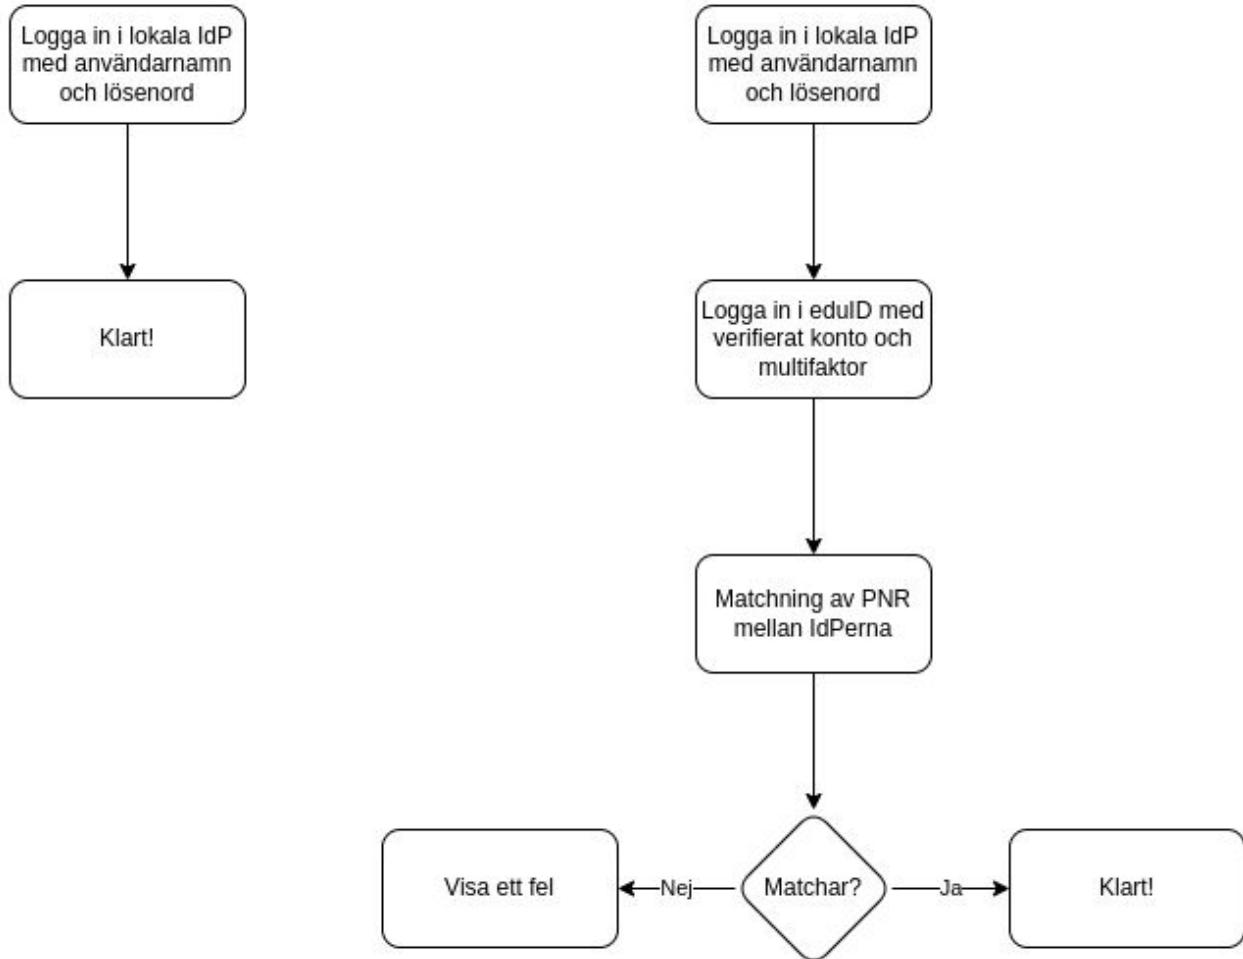

BRASKLAPP

PasswordProtectedTransport

Refeds MFA

Flödet

MFA flödet

- Ersätter Password flödet som huvudflöde
- Bygger på två sub-flöden
 - Password
 - SAML
- SAML flödet konfigureras för att
 - stödja Refeds MFA principal
 - peka vilken IdP man ska proxa vidare till (t.ex edulID)

Lokala IdP som en SP

Den lokala IdP måste också agera som en SP

Behöver en SPSSODescriptor med signing- och encryption-certifikat

Dessa certifikat är samma som för IDPSSODescriptor

De två Descriptors ligger i samma metadata-fil

Authentication konfiguration

conf/authn/authn.properties

- Aktivera MFA flöde
- Aktivera Password och SAML som subflöden

conf/authn/mfa-authn-config.xml

- Definiera TransitionMap

Attribute Resolver och Filter

conf/attribute-filter.xml

- IdP måste importera attribut från upstream IdP
- I vår exempel kommer vi att använda norEduPersonNIN

conf/attribute-resolver.xml

- Exponerar norEduPersonNIN från subject till en attribute som kan användas i den lokala IdPn

Subject canonicalization

conf/c14n/subject-c14n.properties

conf/c14n/subject-c14n.xml

conf/ldap.properties

- Sy ihop allting efter inloggning i den upstream IdPn.
- Extrahera norEduPersonNIN från upstream IdP assertion för att använda för attribute resolution i den lokala IdPn.
- Custom javascript för att kontrollera att norEduPersonNIN från lokala IdPn matchar norEduPersonNIN från upstream IdP.
- Resolver search filter ändras till att söka på flera olika principals.
- LDAP måste returnera norEduPersonNIN under autentisering.

Förberedelse inför egen labb

- Vi kommer att arbeta i `metadata.lab.swamid.se` för att inte störa er helpdesk.
 - Logga in och hämta hem er Metadata för IdP:n ni vill labba med.
 - Kopiera IDPSSOSecriptor och lägg in som SPSSODescriptor
 - Ladda upp till `Metadata.lab.swamid.se` och meddela mig (Björn) vilket ID ni fick :-)
- Kontakta mig (Björn) under nästa paus för att få ut ett testkonto till `eduid.dev` som vi kommer att användare senare idag.
 - Finns ett fejkat personnummer till varje testkonto som ni behöver lägga in i er lokala LDAP / AD / SQL för att kunna matcha om ni vill göra det via **norEduPersonNIN**
 - Logga in på **<https://dev.eduid.se/>** och lägg till MFA
 - Notera även vilket personnummer som tillhör ”ditt” konto om du vill matcha på norEduPersonNIN.
- All konfiguration finns tillgänglig här: <https://tinyurl.com/swamid-hackaton>

Lägg till en SPSSODescriptor i er metadata

<https://shibboleth.atlassian.net/wiki/spaces/KB/pages/1459979597/Using+SAML+Proxying+to+another+IdP#UsingSAMLProxyingtoanotherIdP-UpdateyourIdPsmetadata>

```
