About KI Bibliometric Database

The primary aim of the Karolinska Institutet/SLL bibliometric database is to provide high quality bibliometric analyses for Karolinska Institutet/SLL. It is not possible to make certain who has actually written a publication by looking at a list of author names (usually including only initials instead of first names). To be able to make high quality analyses, all authors affiliated to Karolinska Institutet/SLL are therefore asked to verify their own publications and to supply information about at which organisational unit/units each individual publication was produced.

Bibliometric indicators are calculated for each publication that has been successfully verified. Indicators for an individual researcher

Workshop: Create your Publication list and get your numbers (e.g. H-index, ORCID, Journal Impact Factor)

Courses & Workshops

In this workshop we will guide you through some resources that can help you create an updated publication list that includes the citation score, the journal impact factor and links to the full text. We will also take you through the steps on creating an author ID (ORCID and/or Researcher ID). If wanted, we can also touch on other metrics: article metrics, journal metrics, altmetrics etc.

This workshop is for doctoral students and researchers at KI. You must have and supply an email-address with the ending ki.se. **Register before May 20.**

#4 The dream of identifier harmony

I avsnitt #4 skjuter PIDpodden från höften. Vi erbjuder hårdrocksrecensioner av PID-system men utlovar ingen validitet. Vi tipsar också om vad man bör tänka på när man använder, administrerar och skapar PID-system. Handfasta tips i form av en skoldag. Förvänta dig ingen rast eller lunch bara. No rast for the wicked! Karin lanserar dessutom kanske PID-poddens nya motto. Häng med!
