FW CNaaS NAT

Source NAT is usually what are used.

Example of a Source NAT using a pool as a public ip address (clients on the inside have addresses from the 10.0.0.0/23-net and will be NATed to the 193.10.55.17-address when going the the internet):

```
#> show configuration security nat
source {
    pool office-outside {
        address {
            193.10.55.17/32;
        }
    }
    address-persistent;
    rule-set office {
        from zone office;
        to zone VR-INET;
        rule r1 {
            match {
                source-address 10.0.0.0/23;
                destination-address 0.0.0.0/0;
            }
            then {
                source-nat {
                    pool {
                        office-outside;
                    }
                }
            }
        }
    }
}
```
