SWAMID Identity Management Practice Statement

Introduction

An Identity Management Practice Statement (IMPS) is defined in the SWAMID Policy:

> *The Identity Management Practice Statement is a description of the Identity Management lifecycle including how Subjects are enrolled, maintained and removed from the identity management system based on the Identity Assurance Profiles.*

An Identity Management Practice Statement is a requirement for SWAMID membership.

Guidance

- The identity management practice statement should be short and to the point.
- Describe essential processes in detail - bullet points and short descriptions are usually enough.
- Make sure the description matches reality. In the case of a security breach you will be audited against your current practice statement.
- An identity management practice statement template is available at SWAMID Assurance How-To.
